**1. Abstract**

**Disaster Alert and Community Response App** is a digital platform designed to improve communication, coordination, and response during natural and man-made disasters. During emergencies such as floods, earthquakes, cyclones, fires, or other hazardous situations, people may face difficulties in receiving timely alerts, locating safe areas, and communicating their needs to others. The proposed application provides a centralized platform for sharing disaster-related alerts and important emergency information. Users can receive location-based alerts, report incidents, share their current status, and access information about nearby safe locations and emergency services. The application can also support community-based response by allowing users to communicate requests for help and share verified information with other affected people. By connecting citizens, volunteers, and emergency responders through a common platform, the application aims to reduce communication gaps, improve awareness, and support faster community response during emergencies. The system provides an accessible and organized approach to disaster communication and community coordination.

**2. Team Details**

| <b>Roll Numbers</b> | <b>Name of the Student</b> |
|---------------------|----------------------------|
| 2520090096          | GOUTHAM VIKAS PARIMI       |
| 2520090081          | SAI RAM PRAGNEY            |

**3. Frameworks / Platforms / Software Used**

Frontend: HTML, CSS, JavaScript, React.js

Backend: Node.js, Express.js

Database: MySQL

Maps and Location: Google Maps API

Notifications: Firebase Cloud Messaging(FCM)

Authentication: Firebase Authentication

Development Environment: Visual Studio Code

Version Control: Git and GitHub

API Testing: Postman

Deployment: Vercel / Render

**Guide Name and Signature (remarks if any)** \_\_\_\_\_
